

DEALERS WANTED

GAINER DRIVE BELT INSTALLATION TOOLBOX

- **GAINER GL-2000
Belt Pulley Alignment Tool**

Misinstalled pulleys will cause transmit power loss.
Misinstalled pulleys will cause belt beat and wear fast.

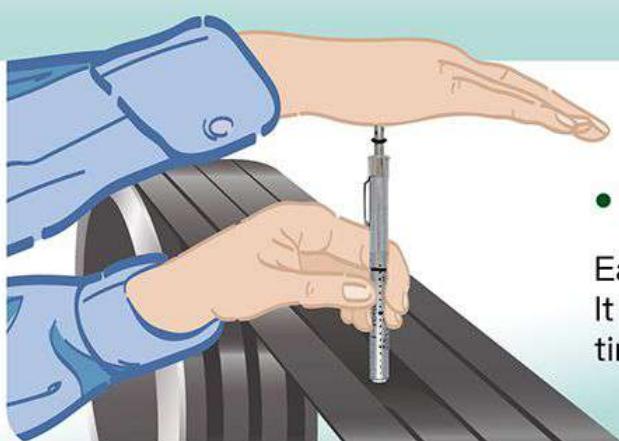

- **GAINER V Belt Pulley Gauge**

Identify pulley's machining precision and inspection
pulley degree of wear.

To prevent flawed pulley cause belt beating, slips
problem and wear the belt.

ISO : SPZ . SPA . SPB . SPC

- **GAINER Belt Tension Meter**

Easy, protable and fast detect belt tension in time.
It is available for v-belt, synchronous belt,
timing belt and flat belt of various brands.

GAINER Transmission Tech CO., LTD.

No. 16, Dongqiao 10th St., Yongkang Dist., Tainan City 710, Taiwan (R.O.C.)
E-mail : info@gainer-tw.com

GL-2000 PULLEY ALIGNMENT TOOL

- The design of magnetic is the easiest, fast and accurate drive belt alignment tool.
- Circle 360° level vial is available for various vertical transmission type.
- Available for various pulley, toothed and groove is unlimited.
- The adjustable calibrator is to meet the calibrator tolerance, efficiently solve the problem of different widths between two pulley edges misalignment.

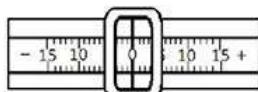

GL-2000 Specification

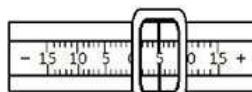

Laser Class	IIIa	Temperature Range	-5°~50°	Material	Aluminium Anodizing
Output Power	< 5mW	Battery Type	CR123A 3V / 16340 3.7V	Dimension Body	104x42x48 mm LxWxH
Beam Angle	78°	Level	360° vial	Dimension Case	235x180x70mm LxWxH
Wavelength	500-550nm	Targets	3pcs	Weight	1000g
Measuring Accuracy	< 0.25mm / 0.1°	V Belt Pulley Gauge	SPZ · SPA · SPB · SPC	Belt Tension Meter	lbs 0 - 35 / 0 - 150N

Adjustable Calibrator

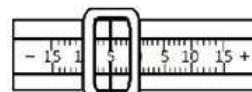

When it has the same width between two pulley edges, the calibrator scale is at the centering point (0). When it has different widths between two pulley edges, adjust the calibrator at the tolerance centering point.

Centering point

Positive tolerance

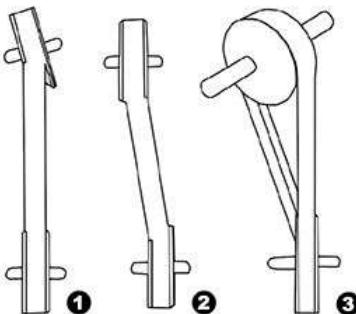

Negative tolerance

360° Level Indicator Ensure Vertical Transmission

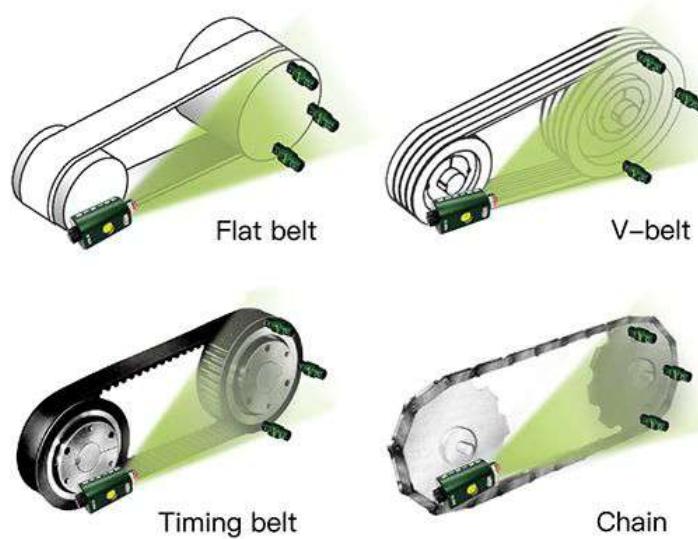

Types Of Misalignment

- Horizontal angular misalignment
- Axial misalignment
- Twist misalignment

GAINER® Belt Pulley Alignment Tool

Application of radial transmission 經向傳動的應用 径向传动的应用

GL-2000 Belt Pulley Alignment Tool

1. Alignment Tool Instruction

- 1.1 Place GAINER® GL-2000 belt pulley alignment tool on the wheel (A) by the motor side.
- 1.2 Measure the difference of the widths between two wheel edges. Adjust 3 calibrator scales to the actual centering points.
- 1.3 Place the 3 calibrators on the 3, 6 and 12 o'clock position on the wheel (B).
- 1.4 Turn the power on. Then, project GL-2000 on the calibration targets.
- 1.5 Inspect the 360° level vial and calibrators adjust them until alignment.
- 1.6 Recommend wearing auxiliary glasses under strong sunlight or outdoor environment.

2. Adjustable Calibrator Instruction

The design of the adjustable calibrator is to meet the calibrator tolerance when it has different widths between two pulley edges. Basically, when it has the same width between two pulley edges, the calibrator scale is "0", and that is the actual centering point. As shown in the figure 1. If it has different widths between two pulley edges, please refer to the example!

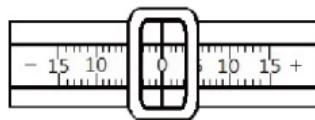

Figure 1

Description of drawing symbols:

A = driving pulley

B = driven pulley

W= pulley edge width

Example1

$$AW-BW=+5\text{mm}$$

driving pulley width - driven pulley

width=+5mm

The scale +5 on the calibrator

is the actual centering point.

As shown in the figure2.

Example 2

$$AW-BW=-5\text{mm}$$

driving pulley width - driven pulley

width=-5mm

The scale -5 on the calibrator

is the actual centering point.

As shown in the figure3.

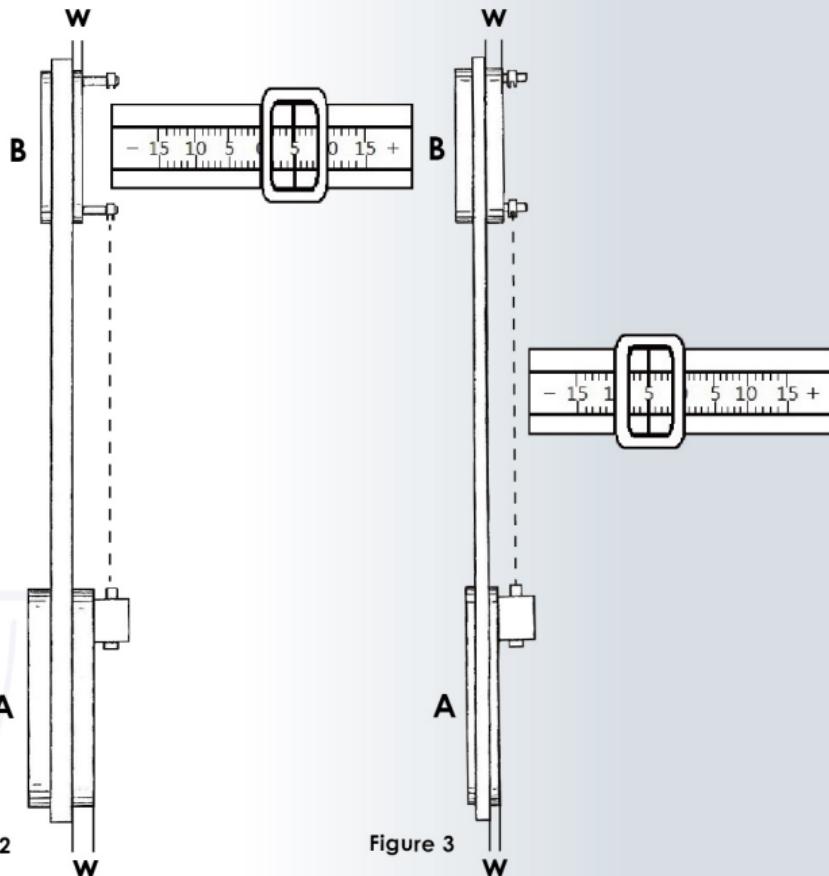

Figure 2

Figure 3

3. Adjustment to Correct Alignment

- 2.1 Horizontal angular misalignment/shafts are not parallel to one another.
 - Adjust the mounting and height of the motor or driven machinery. Inspect the device until proper alignment is achieved.
- 2.2 Axial misalignment/wheels are not parallel to one another.
 - Reinstall the wheels. Inspect the device until proper alignment is achieved.
- 2.3 Twist misalignment/horizontal angular + Axial misalignment/shaft and wheel are not in parallel to one another.
 - Adjust the parallelism of the shafts. Inspect the 360° level vial and calibrators until alignment is achieved.

4. Maximum of Misalignment Tolerance

In order to achieve better accuracy in alignment, GAINER® established the specification allowance misalignment for flexible transmission drives.

- V belt 05° (1/2 degree) 2 mm mark on the calibrators.
- Rope 05° (1/2 degree) 2 mm mark on the calibrators.
- Chain 0.25° (1/4 degree) 1 mm mark on the calibrators.
- Timing belt 0.25° (1/4 degree) 1 mm mark on the calibrators.

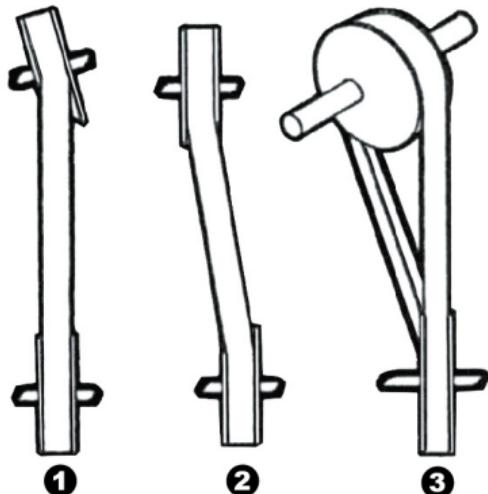

5. Notes

1. Do not point the GL-2000 directly into the eyes.
2. Avoid the device in contact with water or in a highly humid environment.
3. Please follow the local laws and regulations while using laser equipment in your area.
4. Do not take the device apart. If there is a problem with the device, please contact your GAINER® dealer.

SPECIFICATION

Item model	GL-2000
Laser class	IIIa
Output power	<5mW
Beam angle	78°
Wavelength	500-550nm
Measuring accuracy	<0.25mm/0.1°
Temperature range	-5° ~ 50°
Battery type	CR123A 3V/16340 3.7V
Level	360° vial
Targets	3pcs
Material	Aluminium Anodizing
Dimensions body	104 x 42 x 48 mm LxWxH
Weight	330g
Dimensions case	235 x 180 x 70 mm LxWxH
Gross weight	1000g
V Belt pulley gauge	SPZ、SPA、SPB、SPC
Belt tension meter	lbs 0-35/0-150N

TYPES OF MISALIGNMENT

1. Horizontal angular misalignment
2. Axial misalignment
3. Twist misalignment

綠 G 光 -2000 皮帶輪對心儀

一、對心方法

1. 將GAINER®皮帶輪對心儀放置馬達(A)輪子上
2. 測量兩輪緣寬度差異，調整校正器之對準點
3. 校正器以3.6.12點鐘方向放置(B)輪子上
4. 打開電源，讓GL-2000投射在校正器
5. 檢測360°水平儀與校正器之對準點，調整對心
6. 空曠室外與強光烈日下，建議使用輔視眼鏡

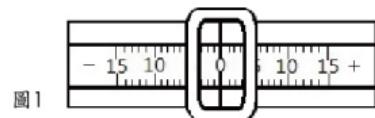

圖1

二、可調整式校正器說明

可調整式校正器的設計，是為了實現兩輪緣不同寬度時的校正補償值，基本上兩輪緣同寬時校正刻度為「0」，是實際對中點。如圖1
如果兩個輪緣寬度不一樣時，請參考範例！

附圖符號說明：

A=主動輪 B=從動輪 W=輪緣寬

範例一

$AW-BW=+5mm$

主動輪寬-從動輪寬= $+5mm$ ，

校正器上刻度+5為實際對中點。如圖2

範例二

$AW-BW=-5mm$

主動輪寬-從動輪寬= $-5mm$ ，

校正器上刻度-5為實際對中點。如圖3

圖2

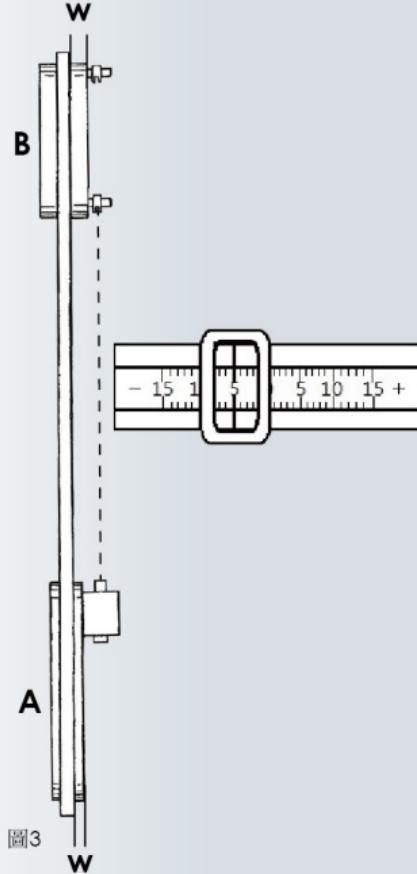

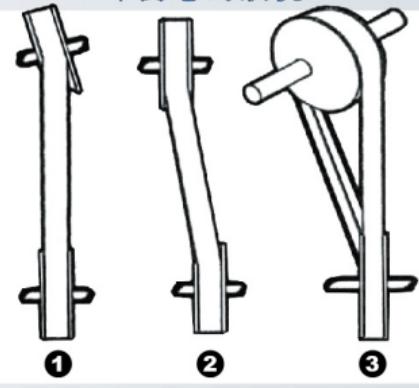

圖3

三、不對心的問題對策

1. 角度式不對心/轉軸不平行
→ 調整馬達或被驅動機台腳座高度，重新定位調整對心
2. 平行式不對心
→ 重新定位安裝輪子，檢測校正器，調整對心
3. 傾角式不對心/角度式 + 平行式不對心/轉軸.輪子不平行
→ 調整轉軸平行度，檢測360°水平儀與校正器調整對心

不對心的狀況

四、對心的容許公差

角度式

平行式

傾角式

為了更精確的對心要求，GAINER®訂定了對心容許公差規範

- V型皮帶 → 0.5° ($1/2^\circ$) 校正器上2mm刻度
- 繩索 → 0.5° ($1/2^\circ$) 校正器上2mm刻度
- 鏈條 → 0.25° ($1/4^\circ$) 校正器上1mm刻度
- 時規皮帶 → 0.25° ($1/4^\circ$) 校正器上1mm刻度

五、注意事項

1. 請勿把GL-2000直接照射眼睛。
2. 請勿在水中使用。
3. 請注意所在地使用儀器的相關管制法則。
4. 請勿任意拆解零組件有問題請洽詢 GAINER®經銷商。

規 格 資 料

雷 射 機 型	GL-2000
雷 射 等 級	Class IIIa
雷 射 功 率	<5mW
雷 射 型 式	78° 扇形出光
雷 射 波 長	500-550nm
測 量 精 度	<0.25mm/0.1°
操 作 溫 度	-5°~ 50°
電 池 規 格	CR123A 3V/16340 3.7V
水 平 儀	水準泡
校 正 器	調整刻度式 x 3pcs
材 質	鋁合金陽極處理
尺 寸	104 x 42 x 48 mm LxWxH
重 量	330g
外 箱 尺 寸	235 x 180 x 70 mm LxWxH
總 重 量	1000g
三 角 皮 帶 輪 量 規	SPZ、SPA、SPB、SPC
筆 型 皮 帶 張 力 計	lbs 0-35/0-150N

绿 G 光 -2000 皮帶轮对心仪

一、对心方法

1. 将GAINER®皮帶轮对心仪放置马达(A)轮子上
2. 测量两轮缘厚度差异，调整校正器之对准点
3. 校正器以3.6.12点钟方向放置(B)轮子上
4. 打开电源，让GL-2000投射在校正器
5. 检测360°水平仪与校正器之对准点，调整对心
6. 空旷室外与强光烈日下，建议使用辅视眼镜

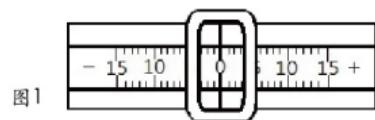

图1

二、可调整式校正器说明

可调整式校正器的设计，是为了实现两轮缘不同宽度时的校正补偿值，基本上两轮缘同宽时校正刻度为「0」，是实际对中点。如图1
如果两个轮缘宽度不一样时，请参考范例！

附图符号说明：

A=主动轮 B=从动轮 W=轮缘宽

范例一

$AW-BW=+5mm$

主动轮宽-从动轮宽= $+5mm$ ，

校正器上刻度 $+5$ 为实际对中点。如图2

范例二

$AW-BW=-5mm$

主动轮宽-从动轮宽= $-5mm$ ，

校正器上刻度 -5 为实际对中点。如图3

图2

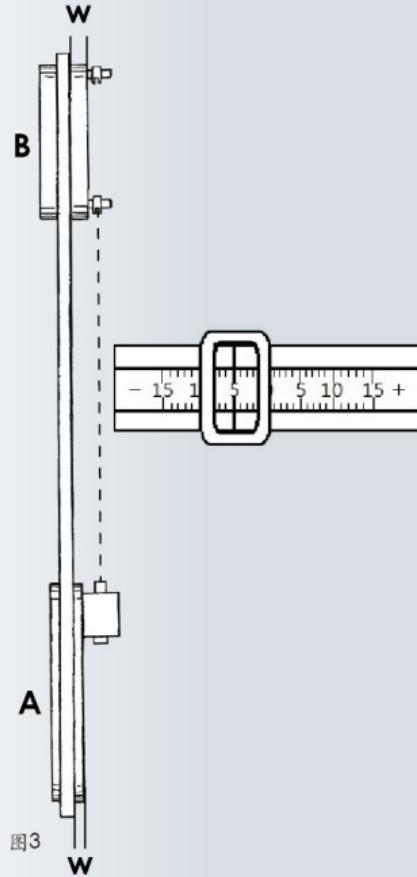

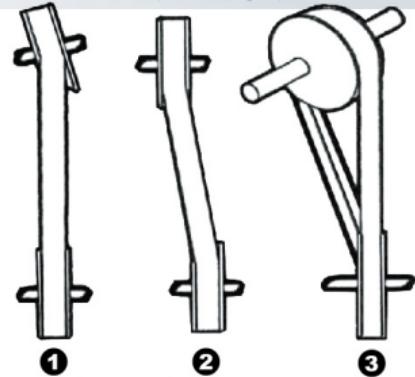

图3

三、不对心的问题对策

1. 角度式不对心/转轴不平行
→ 调整马达或被驱动机台脚座高度，重新定位调整对心
2. 平行式不对心
→ 重新定位安装轮子，检测校正器，调整对心
3. 倾角式不对心/角度式+平行式不对心/转轴.轮子不平行
→ 调整转轴平行度，检测360°水平仪与校正器调整对心

不对心的状况

四、对心的容许公差

角度式

平行式

倾角式

为了更精确的对心要求，GAINER®订定了对心容许公差规范

- V型皮带 → 0.5° (1/2°) 校正器上2mm刻度
- 绳索 → 0.5° (1/2°) 校正器上2mm刻度
- 链条 → 0.25° (1/4°) 校正器上1mm刻度
- 时规皮带 → 0.25° (1/4°) 校正器上1mm刻度

五、注意事项

1. 请勿把GL-2000直接照射眼睛。
2. 请勿在水中使用。
3. 请注意所在地使用仪器的相关管制法则。
4. 请勿任意拆解零组件有问题请洽询GAINER®经销商。
